

CASE STUDY

Strip Graffiti from a Large Brick Building

Objective: Strip paint and graffiti away from a five story building being restored.

Tool: DB800

Dustless Blasting is the perfect paint removal process for large projects such as this five story building that was being renovated.

Dustless Blasting can strip and clean brick walls without damaging or texturizing the brick surface. The PSI can be adjusted easily to insure the wall takes no damage during the stripping process.

With the high efficiency and speed of Dustless Blasting, this crew was able to strip this massive five story building in less than four weeks. They were stripping 500 sqft in less than an hour!

"We're on the rooftop of a five story building, pressure is at 95 PSI and there is still enough power to blast media or remove any type of surface. We're not even at full PSI which would be 150, **so imagine what else this machine can do!.**"
