ENTREPRENEURS

PIONEERING A BRAND NEW INDUSTRY.

The secret to getting
ahead is **getting started.**

BUSINESS OWNERSHIP

Ready for a change?

Dustless Blasting is pioneering a brand new industry — **mobile paint stripping and cleaning**. With versatile equipment that is made to move, you can offer a wide variety of onsite services.

Here is what inspired us to create this exciting business opportunity:

- **Revenue Potential:** The mobile paint stripping and cleaning industry is valued at over \$10 billion annually, with strong year-over-year growth.
- **High Demand:** Look around. Everything is painted, rusty, or dirty. The demand for this service is everywhere, but providers are few and far between.
- **Low Overhead / Startup Costs:** You can start a business for around \$50,000!
- **Quick Startup Time:** You can be operational in days — not weeks or months.
- **High Margins:** Need we say more?
- **Scalable Growth:** It's easy to scale your business by adding trailers and crew as you grow.

- **Smart Risk:** We give you the best of both worlds. Benefit from a community of business owners, marketing support, and a trusted brand to help you succeed — all without franchise fees.

Did we mention it's NOT a franchise?

You work hard for your money, so we believe you should **keep all the profits**.

- No ongoing fees
- No corporate limitations
- No territories
- Keep 100% of your profits

We believe in setting you up for success, so you can count on training, support, marketing materials, and advertising services.

Your success will never be dependent on someone else again.

BUSINESS OWNERSHIP

DUSTLESS BLASTING®

WHY DUSTLESS BLASTING?

Dustless Blasting is a form of wet abrasive blasting that efficiently removes paint, corrosion, and coatings from a variety of surfaces including metal, brick, and wood.

Unlimited Revenue Potential

Dustless Blasting equipment owners have a distinct **competitive advantage** from the start.

Armed with brand recognition, marketing support, reliable American-made equipment, and a self-contained rig that's made to move, you're able to perform countless onsite jobs that others simply cannot.

You can offer paint stripping, cleaning, and etching services in a variety of **high demand markets**. Some examples include:

- **Automotive:** paint, rust, and body filler removal, powder coating removal, classic car restoration, and more.
- **Commercial:** building exteriors, graffiti removal, line stripe removal, stone etching, and more.

- **Residential:** home exteriors, decks, patio furniture, swimming pools, concrete, stone, and more.
- **Fleet:** fleet trucks, buses, railroad cars, ships, boats, and more.
- **Construction:** masonry cleaning, heavy equipment, cleaning, paint stripping, and more.
- **Industrial:** factories, machinery, metal buildings, tanks, towers, and more.

The bottom line is that almost everything is painted, rusted, or dirty. By restoring items, you are providing customers with a valuable alternative to purchasing new. It's a win-win for everybody.

BEFORE

AFTER

“I had more business than I could handle. I made my investment back in about 2 months. I have used it to strip brick, concrete, and burned wood for a local disaster restoration company.”

— RYAN W., BUSINESS OWNER

I can run my machine for **5 HOURS** a week.

5 hours x \$300/hour =
\$1,500/week
x 52 weeks =

\$78,000
YEARLY GROSS REVENUE

I can run my machine for **10 HOURS** a week.

10 hours x \$300/hour =
\$3,000/week
x 52 weeks =

\$156,000
YEARLY GROSS REVENUE

I can run my machine for **40 HOURS** a week.

40 hours x \$300/hour =
\$12,000/week
x 52 weeks =

\$624,000
YEARLY GROSS REVENUE

WHY DUSTLESS BLASTING?

6

DUSTLESS BLASTING®

HOW MUCH MONEY CAN I MAKE?

Part Time

- Supplement your income on the **weekends**
- Make some extra cash in **retirement**
- Fit around an **unconventional work schedule** (e.g. offshore worker, teacher, firefighter)

Even if you only plan to run your Dustless Blasting machine for 5 hours a week, the cash adds up significantly. That's because our contractors make, on average, **\$300 per hour** of blasting.

Full Time

- **Escape** your nine-to-five
- Start working for **yourself**
- **Stop making someone else rich**

If you can run your machine for 10, 20, or even 40 hours a week, you'll see why so many of our contractors are happy to quit their jobs in favor of working for themselves.

Scaling up

If you start to get more business than you can handle, scaling up is simply a matter of buying another machine, teaching someone how to use it, and sending them off to do the jobs you can't.

Based on blasting for under 20 hours a week, your business could plan to deliver sales of about:

- \$300,000 in the 1st year with 1 mobile system
- \$600,000 in the 2nd year with 2 mobile systems
- \$900,000 in the 3rd year with 3 mobile systems

Adding Services

The opportunities to make money don't stop after you have removed all the old coatings, rust, and grime for your customer. You can use the auxiliary air ports to power paint guns, air tools, and more.

This means that you can **offer sealing, priming, or painting** services in addition to blasting — and charge a premium for doing so. After all, this makes you a **one stop shop for your customers.**

HOW MUCH MONEY CAN I MAKE?

DUSTLESS BLASTING®

INVEST IN YOUR SUCCESS

We've made it more affordable than ever to start your own business. We believe everyone has the right to be their own boss, and this is our way of making that dream a reality.

Remarkably affordable

Unlike most start up businesses, which can cost hundreds of thousands of dollars, you can own your Dustless Blasting equipment for **the cost of a pickup truck**. Hundreds of contractors have used this remarkably affordable machine to supplement their income or **quit their day jobs**.

Each unit is self-contained, so you're ready to start blasting as soon as you pick up your machine.

What's more, Dustless Blasting allows you to make more in an hour than many people make in a day. This is truly a machine that **pays for itself in no time**.

Other costs and considerations

- A truck or SUV to pull the trailer
- Consumables (abrasive, rust inhibitor)
- Business insurance
- Dustless Blasting Marketing Services®

Financing

Dustless Blasting is proud to offer a financing option for your purchase. Equipment financing offers you several advantages.

- Preserve cash flow
- Predictable monthly expense
- Start making money right away

You can own a business for the cost of a pickup truck.

HOW TO REACH CUSTOMERS

The Importance of Marketing

It doesn't matter how good your services are if potential customers can't find you. That's why we **set you up for success** with a full suite of marketing materials.

Printed Materials and Apparel

Impress your customers with professional trifold brochures, quote forms, business cards, and shirts, all customized with your company information.

Online Presence and Advertising

The vast majority of consumers — 97% to be exact — go online to find a local service. If you want them to choose your company, you need to be on the web. We can build a customized website for your business that's full of information, pictures, and videos to show off your work.

We will also create social media ads and Google ads for your business, which are shown to **thousands of potential customers in your area.**

— DIANE M., BUSINESS OWNER

EXISTING BUSINESS

REINVENTING AN INDUSTRY.

The better way
to **blast.**

YOUR TOUGHEST JOBS MADE EASY.

What is Dustless Blasting?

Dustless Blasting is the world's fastest, most cost-effective and environmentally friendly surface preparation tool. It does **everything a sandblaster can do, but better.**

How does it work?

- Water and media are mixed in the blast tank.
- During blasting, water encapsulates the abrasive and coating being removed, **preventing them from becoming airborne.** The droplets fall to the ground, keeping surrounding areas clean.
- The water adds mass and energy, making Dustless Blasting **more powerful** than dry blasting.
- Rust inhibitor **prevents flash rust** for up to 72 hr.

Venturi Suction Delivery System

As opposed to a gravity-fed system, Dustless Blasting uses a Venturi suction delivery system. The abrasive and water are pulled from the bottom and exit the top.

Gravity Fed System

Multiple valves, wear parts, and intricate control boxes
Prone to failure
Parts are often proprietary to the manufacturer

Dustless Blasting

A simple system
No proprietary valves
You'll never need a field tech to come service it

USE 33% LESS ABRASIVE
THAN DRY BLASTING

REDUCE CONTAINMENT
SUPPRESS THE DUST PLUME

STOP OUTSOURCING
KEEP PROCESSES IN HOUSE

UP TO 20X FASTER
THAN TRADITIONAL METHODS

ELIMINATE BOTTLENECKS
IN YOUR PROCESS

SAVING YOUR BUSINESS MONEY

Efficiency

- Others can work nearby unaffected while blasting is being performed — even welders and painters.
- Consumes 1/3 less abrasive than dry blasting.

Speed

- More powerful than dry blasting, allowing the operator to complete work faster.
- Blasting is approximately 20 times faster than sanding or grinding coatings away.

Safety

- Because dust is suppressed, visibility is increased. This reduces the risk of accidents.
- A wet delivery method, such as Dustless Blasting, is **recommended by OSHA** as a primary means of protecting workers from silicosis and the hazards of airborne abrasive blasting materials.

Environmental Excellence

- Debris is captured with water during the blasting process, making containment and cleanup easy.
- Perfect for use in areas with **strict environmental rules** and regulations.

Versatility

- Optional air drying and cooling system gives you the flexibility to blast wet, dry, or with soda.
- Use a wide **variety of compatible abrasives**, including crushed glass, garnet, slag, glass bead, soda, walnut, corn cob, plastic, and more.
- Pressure and flow are easily adjustable to suit any substrate.

The Mobile Advantage

- Mobile configurations are available, allowing you to take your services on the road and bring in more income streams.

EQUIPMENT COSTS

Which blast pot should I choose?

- Every blast pot is capable of the same process, the main difference is in continuous run time.
- Productivity is also determined by what size compressor is used.
- The higher the CFM rating of the compressor, the larger blast pattern can be achieved, and the faster work can be completed.
- A larger pot also needs to be refilled less often, saving time.

Requirements

- Standalone blast pots are recommended for businesses that already own a high-volume air compressor.
- With the addition of an air drying & cooling system, you can perform dry blasting or soda blasting in addition to Dustless Blasting.

“It took 2 weeks and four guys to remove the calcium and algae from these fish tanks. With Dustless Blasting, we finished it in two days.”

– DAVE C., ARIZONA GAME & FISH

AIR DRYING & COOLING

Avoiding Moisture in Dry Blasting

All atmospheric air contains water vapor which will begin to condense into liquid water in a compressed air system.

A properly treated air supply can:

- Prevent clogs from damp abrasive
- Reduce flash rusting of the substrate
- Increase productivity by 12–15%

- Less damage to pneumatic controls, filters & parts
- Prevent malfunction of controls due to rust, scale, and clogged orifices
- Inherently use less abrasive with dry air

Add Services

The auxiliary air ports provide a clean air supply, ideal for powering paint sprayers and air tools.

COMFORT SYSTEMS

During blasting, the following PPE is required:

- **Eye protection**, such as a face shield or safety glasses
- **Hand protection**, such as leather gloves
- **Ear protection**, such as earplugs or earmuffs

Comfort Systems

For your safety and comfort, we recommend the NIOSH approved RPB® Nova 3® blast respirator.

- The built in climate control is like **wearing your own personal air conditioner.**
- Noise-insulating helmet allows you to wear earbuds — **listen to music or take calls while you work.**
- **Tear off lenses can be removed** quickly without having to take the whole helmet off.
- **Dial in a custom fit** with ratchet adjustable helmet padding.

“I bought the Nova 3 kit several weeks ago and I don’t know how I did it without it.”

— KEVIN C., BUSINESS OWNER

“Nova 3 is worth its weight in gold.”

— ROB L., BUSINESS OWNER

DUSTLESS BLASTING®

CONSUMABLES & ACCESSORIES

Blast Media

For wet blasting, any abrasive that is clean, consistent, and sinks in water will work. Our favorite is 40/70 recycled glass, because it's clean, inexpensive, environmentally friendly, and suited for a wide variety of jobs.

Rust Inhibitor

Add Rust Inhibitor to the blast water at a 1:100 ratio to remove chlorides from the surface of the metal being blasted. It prevents flash rust for up to 72 hours and leaves a primer-ready surface

Pinch Hoses

The pinch hose is a crucial part of your blaster's operating system, and what stops the machine from blasting.

Other systems can have complicated, costly, proprietary parts that are difficult to replace. On the other hand, the pinch hose is simply an inexpensive section of blast hose.

Nozzles

Specialty nozzles can change the shape of the blast pattern for specific jobs.

SLV Nozzle: All-purpose nozzle creates a large circular blast pattern. All Dustless Blasting machines come with SLV nozzle(s).

ST Nozzle: Gives you a small, precision blast pattern. Great for fences and small items; avoids wasted media.

Fan Nozzle: Spreads blast pattern out to cover a rectangular area. Best for quickly blasting large flat surfaces.

XL Performance Nozzle: Speeds up blast velocity at the nozzle; can help complete jobs faster.

FINANCING IS AVAILABLE

Preserve cash flow

- Affordable monthly payments to fit your budget.
- Allows you to plan for a predictable expense every month.
- Gives you plenty of flexibility with your business and lifestyle.
- At the end of the loan term, you'll own your equipment, with no payments, for years to come.

Approval is easy

- The equipment itself acts as your collateral.
- Complete a 2-minute application online to get pre-approved quickly.

Get started right away

- Why waste more time at your old job?
- Easy and profitable business model allows you to make money right away.

“My first job is going to pay for my machine. How can you beat that? Everything I saw in the video, it's better. I'm more than happy.”

FREQUENTLY ASKED QUESTIONS

OVERVIEW

Is it really dustless?

Dustless Blasting uses water to suppress the plume of dust, allowing you to work almost anywhere with minimal containment and cleanup.

Unfortunately, the process isn't magic. Media that goes into the machine must come out, and it doesn't disappear into thin air. But compared to sandblasting, the process creates far fewer airborne particles.

Where is the equipment made?

We are proud to be a 100% American manufacturer located in Houston, TX.

Is there a warranty?

MMLJ pressure vessels (blast pots) are backed by a lifetime warranty.

Other components, such as the compressor, axles, and water pump are covered by their own individual manufacturer warranties.

REQUIREMENTS

Which machine should I choose?

Your choice will depend on the type of jobs you want to tackle. All our machines are capable of the same process, but we offer various sizes that are appropriate for many different jobs, from small hobby projects to large industrial jobs.

The most popular machines for starting a business are the DB500 Mobile XL and the DB800 Mobile XL.

What kind of abrasive can be used?

For wet blasting, you can use any abrasive as long as it is clean, consistent, and sinks in water. The most inexpensive and popular choice of media is 40/70 recycled crushed bottle glass.

The mobile machines are also capable of dry blasting and soda blasting, for which you can use any media that a traditional dry blaster or soda blaster can use.

What PPE is required?

When open air blasting, the following is required:

- Eye protection (e.g. face shield or safety glasses)
- Hand protection (e.g. leather gloves)
- Ear protection (e.g. earplugs or earmuffs)

Can my truck pull the mobile trailer?

When fully loaded, the compact DB500 Mobile S weighs about 5,500 lbs and it can be towed by most trucks.

The larger DB500 Mobile XL weighs about 9,100 lbs when fully loaded. It generally requires a 1-ton truck to tow it.

BLASTING

What about rust?

By using our specially formulated rust inhibitor, you can prevent flash rust for up to 72 hours. Add the inhibitor to the blast water to prevent flash rust during blasting, and then use it as a rinse after blasting is complete.

Will it warp metal?

The Dustless Blaster will NOT cause warping, because friction and heat are reduced by the water. Warping occurs when the metal heats up due to friction from dry abrasive. In fact, the temperature of the metal being blasted usually comes down about 10° from ambient.

PAYMENT / FINANCING

Do you offer financing?

Yes. We are proud to offer a financing option for your purchase. Get pre-qualified on our website.

What is the lead time?

Machines will typically ship immediately after they have been paid in full.

STARTING A BUSINESS

Is it a franchise?

Dustless Blasting is not a franchise. There are no fees or royalties, ever. You truly own your business and are free to make 100% of the decisions and keep 100% of the profits.

You still get some of the benefits that come with a traditional franchise, like brand recognition and pre-made marketing materials.

Do I need your marketing materials?

We do not require our contractors to purchase our marketing materials. However, keep in mind that your time is valuable. You don't have to develop a marketing strategy, design brochures, or learn to code a website when we've already done all that for you.
